PROFESSIONAL SUMMARY

Software Engineering undergraduate at Daffodil International University who builds complete products independently — from Forge AI, a multi-agent system that turns a single product prompt into a full set of coordinated engineering artifacts, to full-stack web platforms for community and marketplace use cases. Comfortable owning a project across design, architecture, and implementation.

PROJECTS

Forge AI

Personal Project

AI-native platform that orchestrates a team of specialist AI agents to design and build software end-to-end

- Designed a platform where a single product prompt (e.g., “Build a food delivery platform”) is decomposed and executed by a coordinated team of specialist AI agents — Product Manager, Architect, UI/UX Designer, Database Engineer, Backend/Frontend/DevOps, Security, and QA.
- Built an orchestrator that sequences agents and passes versioned artifacts — PRD, ER diagram, API spec, architecture doc, security review, test plan, deployment checklist — forward as accepted context for the next stage.
- Added a human-in-the-loop review gate after every agent output, so only approved artifacts progress toward final code generation.

Ragini

Personal Project

Marketplace platform for buying and selling musical instruments

- Built a marketplace platform for buying and selling musical instruments, covering listings, browsing/search, and buyer-seller interaction.
- Designed the core user flow from listing an instrument through to completing a sale.

Club Connect

Personal Project

Centralized hub connecting university clubs across departments

- Built a centralized web platform bringing together university clubs from every department into one discoverable hub.
- Designed the site structure and navigation so students can browse and find clubs by department in a single place.

EDUCATION

BSc in Software Engineering

Jan 1, 2024 – Dec 31, 2027 (Expected)

Daffodil International University — Daffodil Smart City, Ashulia, Dhaka

SKILLS

Languages: JavaScript, TypeScript, Python, C++, Go, PHP, SQL

Frontend: React.js, Next.js, React Native, Tailwind CSS, Bootstrap

Backend: Node.js, Express.js, Flask, REST APIs, Firebase

Databases: PostgreSQL, MongoDB, MySQL, Vector Databases (semantic search)

DevOps & Tools: Docker, NGINX, Linux, Git, VPS Management, CI/CD, Expo, Google Play & App Store deployment

AI/ML: LLM APIs, RAG Pipelines, Vision APIs, Semantic Search, Multimodal Models
